CyberSentinel

Automated Vulnerability Assessment Report

Target: 104.21.15.229

Scan Date: 2025-08-24 22:55:52

Overall Risk Level: Low

DISCLAIMER: This report is generated by CyberSentinel for security assessment purposes. The findings should be verified by qualified security professionals. This tool is intended for authorized testing only on systems you own or have explicit permission to test.

Executive Summary

| Risk Level | Count | Percentage |
|------------|-------|------------|
| Critical | 0 | 0.0% |
| High | 0 | 0.0% |
| Medium | 2 | 100.0% |
| Low | 0 | 0.0% |
| Info | 0 | 0.0% |
| Total | 2 | 100.0% |

Key Findings:

■ 2 Medium-risk issues should be planned for remediation

Port Scan Results

Open Ports Found: 2

| Port | Service | Version | Risk Level |
|------|---------|---------|------------|
| 80 | http | | Medium |
| 443 | https | | Medium |

SSL/TLS Security Analysis

SSL Grade: A

Certificate Information:

| Software | Version | Ana | lysi | S |
|----------|---------|-----|------|---|
|----------|---------|-----|------|---|

Security Recommendations

- 1. Medium-risk issues should be addressed in next maintenance window
- 2. Plan patches and configuration changes
- 3. Review security configurations
- 4. Implement network segmentation and access controls
- 5. Regular vulnerability scanning and security assessments
- 6. ■■ Deploy intrusion detection and prevention systems
- 7. Security awareness training for staff
- 8. Regular security backups and incident response planning
